EXECUTIVE SUMMARY

Hello! I'm Ibrahim Bidi, a Senior JavaScript & Deno Architect, AI Systems Engineer, and Automation Specialist with 22+ years of hands-on software development experience. From V8 engine internals to distributed microservices, autonomous AI agents, algorithmic trading bots, and real-time WebSocket platforms, JavaScript and TypeScript are my core domain.

Over the past two decades, I have architected high-concurrency systems, contributed extensively to open-source, and launched live platforms spanning autonomous AI trading platforms (Ghosn Pro AI), prompt engineering engines (Vibe Note), AI music streaming (SunoMA), multi-account messaging automation (WMAM), AI developer browsers (NIABrowser), and algorithmic trading systems. My journey started with pioneering system tools for Windows 98/XP (Key4Arab, Tifino) and evolved into architecting scalable modern web apps, cloud runtimes, and autonomous agent infrastructure.

CORE TECHNICAL STACK

- **Runtimes & V8 Internals:** Deno / DenoLand / TypeScript, Node.js & Async I/O, V8 Engine Internals & WASM
- **AI, MCP & Autonomous Agents:** LLM Orchestration & AI Agents, MCP (Model Context Protocol), Multi-Account & Chat Automation
- **Full-Stack Frameworks & Libs:** Next.js / React.js / Fresh, React Native (Mobile), REST, GraphQL & Streaming APIs
- **Databases & Realtime Systems:** MongoDB / Redis / pushDB, PostgreSQL / MySQL / SQLite, WebSockets & Event Streams
- **Algorithmic Trading & DApps:** Quantitative Trading Strategies, Exchange APIs & Order Execution, Web3 & Smart Contract Automation

FEATURED PRODUCTION PROJECTS & PLATFORMS

Ghosn Pro AI — Autonomous Crypto Algorithmic Trading Platform & MCP Agent

- Ghosn Pro AI (ai.ghosn.pro): Autonomous algorithmic cryptocurrency trading platform supporting Binance Spot & Futures with sub-millisecond (<1.2ms) real-time indicator computation and custom DSL trading strategies. [ai.ghosn.pro]
- Universal AI Agent Ecosystem: Full Model Context Protocol (MCP) server integration, developer SKILL.md, and OAuth 2.0 connecting Claude, Cursor, Antigravity, and Gemini to live market data and automated order execution. [ai.ghosn.pro]
- Cumulative Long-Term Memory (AI Memory): Persistent strategy knowledge base, multi-target profit/trailing stop-loss automation, Binance Testnet integration with 15k USDT virtual balance, and real-time Telegram/Webhook alerts. [ai.ghosn.pro]

Vibe Note — AI Prompt Bank & Dynamic Variable Engine

- Vibe Note Web (vibenote.sbs): Curated platform featuring 10,000+ AI prompts with interactive dynamic variable inputs, instant testing, and multi-category prompt engineering workflows. [vibenote.sbs]
- Vibe Note on Google Play Store: Official Android mobile app for discovering curated AI prompts, customizing dynamic variables on the fly, and cross-device prompt management. [play.google.com/store/apps/details?id=com.vibzcode.note]

SunoMA — Endless AI Radio & Music Studio

- Suno.ma: Endless AI procedural radio streaming music across multiple genres. [suno.ma]
- SunoMA Studio: AI music creation via web, REST API, and LLM assistants over MCP. [suno.homes]
- Suno-MA GitHub Repository. [github.com/Zizwar/suno-ma]

WMAM — WhatsApp Multi-Account Manager & Automation

- Advanced enterprise multi-account WhatsApp management infrastructure with AI-driven smart auto-replies, message scheduling, and WebSocket real-time syncing. [msn.so]

NIABrowser — AI-Powered Developer Browser

- Specialized developer browser integrating AI chat assistant, live script execution, developer tools, and workflow automation. [niabrowser.vibzcode.com]

VibzCode Pro — Cloud Workspace & IDE

- Cloud-based developer environment for rapid code prototyping, real-time testing, and cloud execution. [app.vibzcode.com]

Deno Algorithmic Trading Bot

- High-performance quantitative trading bot written in Deno/TypeScript featuring technical indicators, real-time WebSocket market streams, and automated order execution. [github.com/Zizwar/deno-trading-bot]

Mushaf Mauri — Digital Quran Platform

- Modern digital Quran platform (Warsh narration) with high-fidelity audio streaming, responsive web architecture, and mobile application. [mushaf.ma]

WinoScript & Pioneer Software

- WinoScript: Created an Arabic programming framework and language abstraction on JavaScript. [github.com/Zizwar/winoscript]
- Tifino: Developed Tifinagh script support for Windows with 100,000+ downloads. [code.google.com/archive/p/tifino]
- Key4Arab: Developed system-level Arabic keyboard integration for Windows 98 non-Arabic editions.

TECHNICAL COMPETENCE & ARCHITECTURE EXPERIENCE

AI Systems, LLMs & Autonomous Automation

- Architected multi-agent LLM systems and custom MCP (Model Context Protocol) servers for external tools integration
- Engineered high-throughput messaging bots and multi-account automation engines using WebSockets, Puppeteer, and async queue pipelines
- Integrated generative audio, multimodal APIs, and streaming responses into low-latency production workflows
- Built conversational AI tools, prompt optimization frameworks, and self-hosted AI microservices

Backend Engineering, Runtimes & Distributed Microservices

- 22+ years mastering JavaScript/TypeScript runtimes: deep expertise in Deno, Node.js, and V8 engine execution
- Designed scalable microservices and serverless architectures with Deno Deploy, AWS Lambda, and Vercel
- Extensive database modeling and query optimization with MongoDB, PostgreSQL, SQLite, and Redis caching
- Built real-time data streaming architectures with WebSockets, SSE (Server-Sent Events), and event-driven backends
- Implemented secure authentication protocols, JWT, OAuth, rate limiting, and API gateways

Algorithmic Trading & Real-Time Financial Engineering

- Developed algorithmic trading bots in Deno & TypeScript implementing RSI, MACD, Bollinger Bands, and custom quantitative indicators
- Integrated exchange WebSocket feeds for ultra-low latency price ingestion and order book analysis
- Implemented risk management, automated stop-loss/take-profit triggers, and position sizing logic

Full-Stack Development & High-Performance Web Apps

- Engineered high-performance web applications using Next.js (SSR/SSG), React, and Fresh
- Cross-platform mobile application development using React Native and native integrations
- SEO optimization, web performance profiling (Core Web Vitals), and accessibility standards
- CI/CD automation, Git workflows, Docker containerization, and modern cloud deployment strategies
